

## FOUR TIPS FOR WINTER SAFETY

It's no surprise that winter months bring increased potential for fire risks and electrical safety hazards. This makes sense because during the coldest months, consumers are using additional electrical devices and appliances, like space heaters, electric blankets and portable generators.

The National Fire Protection Association estimates that 47,700 home fires occur each year in the U.S. due to electrical failure or malfunction. These fires result in 418 deaths, 1,570 injuries and \$1.4 billion in property damage annually. This winter, safeguard your loved ones and your home with these electrical safety tips from the Electrical Safety Foundation International.

- 1. Don't overload outlets.** Overloaded outlets are a major cause of residential fires. Avoid using extension cords or multi-outlet converters for appliance connections—they should be plugged directly into a wall outlet. If you're relying heavily on extension cords in general, you may need additional outlets to address your needs. Contact a qualified electrician to inspect your home and add new outlets.
- 2. Never leave space heaters unattended.** If you're using a space heater, turn it off before leaving the room. Make sure heaters are placed *at least* three feet away from flammable items. It should also be noted that space heaters take a toll on your energy bills. If you're using them throughout your home, it may be time to upgrade your home heating system.
- 3. Inspect heating pads and electric blankets.** These items cause nearly 500 fires every year. Electric blankets that are more than 10 years old create additional risks for a fire hazard. Inspect your electric blankets and heating pads – look for dark, charred or frayed spots, and make sure the electrical cord is not damaged. Do not place any items on top of a heating pad or electric blanket, and never fold them when in use.
- 4. Use portable generators safely.** Unfortunately, winter storms can cause prolonged power outages, which means many consumers will use portable generators to power their homes. Never connect a standby generator into your home's electrical system. For portable generators, plug appliances directly into the outlet provided on the generator. Start the generator first, *before* you plug in appliances. Run it in a well-ventilated area *outside* your home. The carbon monoxide it generates is deadly, so keep it away from your garage, doors, windows and vents.

Get tips on staying **safe** and **warm** during a winter power outage.

## HIGH SCHOOL SENIORS SCHOLARSHIP OPPORTUNITIES

**GLYNN AND MILDRED  
CARPENTER SCHOLARSHIP**

**HIGH VOLTAGE LINEMAN  
SCHOLARSHIP FOR THE PROGRAM  
AT ASU-NEWPORT**

**DEADLINE: March 23, 2020**

## LEVELIZED BILLING

If you don't like surprises, we may have the perfect plan for you. Levelized Billing lets you predict the future! With Levelized Billing, you will know what to expect on your electric bill because the amount will be approximately the same month after month—even throughout peak cooling and heating periods. It does not reduce your electric bill but will smooth out your charges and help you manage your electric bill. Give us a call to begin levelized billing!

## ENERGY EFFICIENCY

### Energy Efficiency Tip of the Month

Are you using your fireplace efficiently? Remember to turn down the thermostat when burning a fire, and close the damper when a fire is not burning.
